FEATURES AND BENEFITS

Orchids International PVC strip curtains are manufactured using quality raw material and advanced technology, to ensure high performance and long working life. PVC being very rigid, stays straight and never bends or distorts under normal care.

PVC Strip curtains restrict the movement of air pollutants. They prevent birds, flies, dust, fumes etc. from entering the working area and ensure proper hygiene is maintained during traffic movement through the doors. They help in controlling the spread of airborne pollutants, dust spray, fumes & noise, Isolate noisy machinery, thus increasing employee comfort and improving efficiency on the shop floor and subsequently improving the work environment.

PVC strip curtains help in separating small and large work places. They can be very easily installed and involves very less maintenance. Usage of PVC strip curtains does not hinder the movement of vehicles and pedestrians through the strips. PVC strip doors do not cause any injury to the pedestrians.

PVC strip curtains act as a barrier in controlling the temperature loss and act as an effective reduction in heat, cold and humidity-loss, thus maintaining the temperature and conserving the energy

FIXING

Orchids International has trained onsite professionals who help the clients in deciding the right variety of strip needed for their industrial applications leading to an efficient, effective and affordable way to better manage the workplace. Based on the door requirements provided by the client, we calculate the length of the strips, the total number of strips and the amount of overlapping required ensuring maximum coverage and functionality on a case by case basis.

We have specially fabricated aluminum channel frames which act as a support system for the PVC strips to hang. These aluminum channels are designed to be installed either above the doors on the wall or suspended from above.
